Inverse kinematics. Differential kinematics. Euler angles. Relationship between geometrical and analytical Jacobian. Dynamic modeling.</p> <p>Robot control:<br/>Planning. Motion control in the joint space (decentralized and centralized) and in the operational space (inverse dynamics). Interaction</p> |

control: force control, hybrid force/position control.

**Modalità verifica apprendimento**

Closed-book, closed-notes, 2 hour written exam consisting of 3 sections assessing knowledge and understanding of the course topics and ability to apply them in a problem solving context. Each section will be independently graded. Threshold to pass is 18/30 and maximum mark is 30/30 cum laude. The final mark is obtained as the weighted mean of marks given to each section of the written exam. Example of a written exam:
