

Anno Accademico 2014/2015

GLOTTOLOGY		
Enrollment year	2014/2015	
Academic year	2014/2015	
Regulations	DM270	
Department	DEPARTMENT OF HUMANITIES	
Course	HUMANITIES	
Curriculum	PERCORSO COMUNE	
Year of study	1°	
Period	1st semester (22/09/2014 - 22/12/2014)	
ECTS	12	
Language		
The activity is split		
501291 - GLOTTOLOGY A		
501251 - GLOTTOLOGY B		

Anno Accademico 2014/2015

GLOTTOLOGY A		
Enrollment year	2014/2015	
Academic year	2014/2015	
Regulations	DM270	
Academic discipline	L-LIN/01 (GLOTTOLOGY AND LINGUISTICS)	
Department	DEPARTMENT OF HUMANITIES	
Course	HUMANITIES	
Curriculum	PERCORSO COMUNE	
Year of study	1°	
Period	(22/09/2014 - 22/12/2014)	
ECTS	6	
Lesson hours	36 lesson hours	
Language	ITALIAN	
Activity type	ORAL TEST	
Teacher	CRISTOFARO SONIA (titolare) - 6 ECTS	
Prerequisites	There are no prerequisites.	
Learning outcomes	The course aims to provide the basic theoretical notions and methodology for studying language in a scientific way an overview of the grammatical structures attested in the world's languages and the diversity of these structures	
Course contents	The course aims to introduce students to the scientific study of language. In particular, it will be shown that the grammatical organization of human languages and its evolution over time reflect a number of general mechanisms that are presumably valid for all languages. These mechanisms can ultimately be related to the organization of the human mind, how human beings perceive reality, and the circumstances in which language is used. The course will	

investigate different domains

pertaining to the grammatical organization of human languages, with particlar regard to the relations between words within the sentence (syntax), the internal structure of words (morphology), the production and function of sounds (phonetics and phonology), the organization of meaning (semantics), and the relationship between grammatical structures and the contexts in which they are used (pragmatics).

Teaching methods

Lectures

Reccomended or required readings

Classroom materials will be presented providing a detailed description of all course topics and relevant references (these materials will also be made available on the web). References will include a number of standard textbooks covering exam topics, as well as several reference works that can optionally be used for in-depth study of specific topics. Classroom materials can be used as a basic reference, and should be combined with selected parts of one or more of the textbooks indicated in

the reference list. Students are welcome to chose any of the latter, through the following are particularly recommended

Lyons, John

1968 Introduction to theoretical linguistics. Cambridge, Cambridge University Press.

Anttila, Raimo

1989 An introduction to historical and comparative linguistics. Amsterdam / Philadelphia: John Benjamins. 2 ed.

McMahon?, April S.

1994 Understanding language change. Cambridge: Cambridge University Press

Assessment methods

Student assessment is made through exam papers consisting of exercises

and questions on course topics. Some of the course lectures will be devoted to solving exercises of the same type as those in the exam papers. Students are allowed to re-sit all the examinations set in each exam session.

Further information

Student assessment is made through exam papers consisting of exercises

and questions on course topics. Some of the course lectures will be devoted to solving exercises of the same type as those in the exam papers. Students are allowed to re-sit all the examinations set in each exam session.

ECTS	6	
Lesson hours	36 lesson hours	
Language	ITALIAN	
Activity type	ORAL TEST	
Teacher	CRISTOFARO SONIA (titolare) - 6 ECTS	
Prerequisites	There are no prerequisites.	
Learning outcomes	The course will provide an overview of the structural diversity of human langages, and how the relevant structures develop over time.	
Course contents	The course will provide an overview of the structural diversity of human langages, and how the relevant structures develop over time. The grammar of human languages is not static. Rather, the structures attested in individual languages (e.g. case markers, prepositions, particular types of verbal forms, coonjunctions, articles, possessive constructions) develop over time through the reinterpretation of preexisting constructions, which typically have different meanings and functions. Such processes of reinterpretation will be illustrated based on data from ancient and modern European languages, as well as languages from different families and geographical areas (such as African,	

Australian, American, Austronesian, and South-East Asian languages). While the structures attested in the world languages are diverse, and often very different from those familiar from European languages, the mechanisms underlying the development of these structures are

usually the same from one language to another, independently of geographical location or genetic affiliation. This makes it possible to define a number of general principles that govern the way in which languages evolve over time.
