

# UNIVERSITÀ DI PAVIA

Anno Accademico 2021/2022

FINANCIAL ECONOMETRICS	
Anno immatricolazione	2021/2022
Anno offerta	2021/2022
Normativa	DM270
SSD	SECS-S/06 (METODI MATEMATICI DELL'ECONOMIA E DELLE SCIENZE ATTUARIALI E FINANZIARIE)
Dipartimento	DIPARTIMENTO DI MATEMATICA 'FELICE CASORATI'
Corso di studio	MATEMATICA
Curriculum	PERCORSO COMUNE
Anno di corso	1°
Periodo didattico	Primo Semestre (29/09/2021 - 14/01/2022)
Crediti	6
Ore	44 ore di attività frontale
Lingua insegnamento	English
Tipo esame	SCRITTO
Docente	ROSSI EDUARDO (titolare) - 9 CFU
Prerequisiti	The course is meant to deepen the technical knowledge of the econometric methods used in the analysis of financial markets. Necessary prerequisites are econometrics, statistics and mathematical finance.
Obiettivi formativi	The objective of this course is to provide a comprehensive and systematic account of financial econometric models and their applications to modeling and prediction of financial time series data, focusing on asset returns and volatilities. The students will learn the analytical tools needed for the specification and estimation of econometric models with financial data. Students at the end of the course will have a working knowledge of financial time series data and gain expertise in the software to conduct the analyses.
Programma e contenuti	Introduction to MATLAB

	<ol style="list-style-type: none"> <li>1. Finite difference equations. Solutions and stability. Stationarity and ergodicity</li> <li>2. ARMA models: Stationarity, invertibility, forecasting</li> <li>3. Maximum likelihood estimation of ARMA models</li> <li>4. VAR: representation and estimation</li> <li>5. Stochastic trends and deterministic trends. Unit root testing</li> </ol> <ol style="list-style-type: none"> <li>2. Empirical asset pricing models: Generalized method of moments (GMM)</li> </ol> <ol style="list-style-type: none"> <li>3. Volatility of financial returns: models, estimation, forecasting             <ol style="list-style-type: none"> <li>(a) Introduction</li> <li>(b) Univariate GARCH models (T, 8,9,10)</li> <li>(c) Multivariate GARCH models</li> <li>(d) Stochastic volatility models</li> <li>(e) Nonparametric estimation of volatility with high-frequency data</li> </ol> </li> </ol>
